

Simplify Your Approach to Integration with CLOVER

An Advanced Integration Platform that Delivers Smarter Decisions, Superior Products, Lower Costs, and Faster Innovation

Rethinking Integration Challenges

Integration has often been viewed as complex, costly, and risky, sidelined in many digital strategies. But with the growing need for an enterprise-wide digital thread, integration has moved up the priority list. In a recent study, 69% of respondents rated digital thread integration as highly important, yet only 25% reported significant progress. CLOVER aims to close this gap.

Simplify Your Integration Journey

Unlike traditional approaches that demand costly, specialized resources, CLOVER provides a scalable, high-performance platform that simplifies integration. With flexible deployment options and robust security, CLOVER empowers organizations to build a digital thread at their own pace, driving down costs and saving time.

Built for the Cloud with Self-Service Flexibility

CLOVER's no-code customization tools and configurable workflows enable quick setup and easy maintenance - whether managed independently or with professional support. By eliminating the need for external resources or deep domain expertise, CLOVER empowers organizations to advance their integration strategy on their terms, dramatically reducing the risks and costs associated with integration.

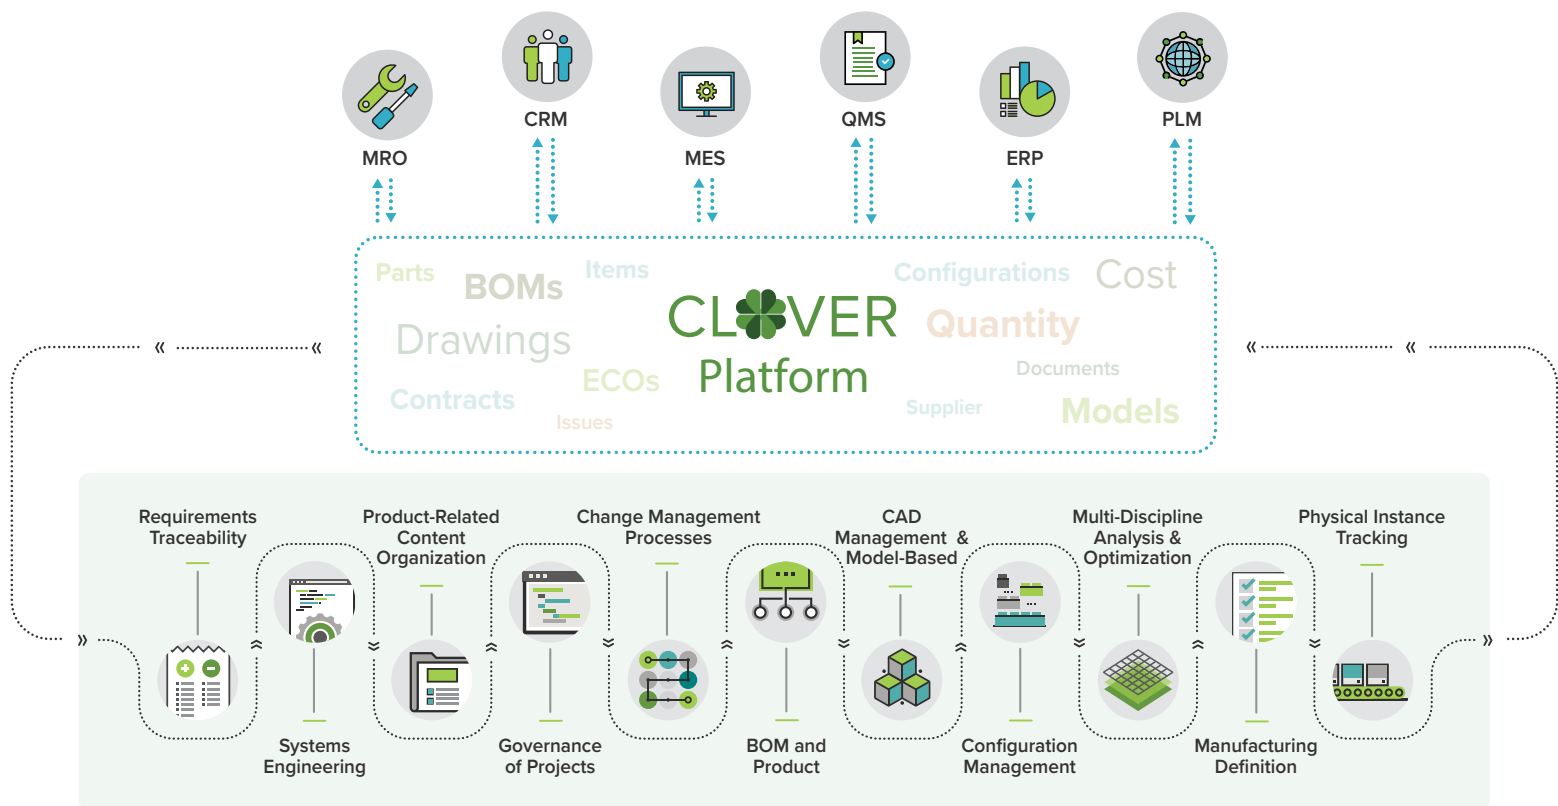

Streamline Operations, Prevent Data Loss

With advanced polling, queueing, tasking, and exception handling, CLOVER ensures critical data is accurately tracked and reported, providing real-time notifications for job completion or required intervention. This visibility allows organizations to monitor data at every stage, delivering the right information to the right systems and optimizing workflows.

With CLOVER organizations will:

- Overcome common implementation hurdles
 - Prebuilt integrations and processes for quick setup.
 - No-code customization tools, reducing reliance on external resources.
 - Handles large files and complex data (e.g., multi-level BOMs) with ease.
- Cut Costs and Complexity of Integration Maintenance
 - Minimizes custom coding needs.
 - Prevents disruptions from system downtime.
 - Eliminates consultant costs when processes evolve.
- Boost Operations and Production Efficiency
 - Advanced exception handling prevents data loss.
 - Cloud-native architecture scales fast for peak demand.
 - Full isolation and encryption safeguards data.
- Effortlessly Add Integrations and Workflows
 - Flexible interface simplifies adding new endpoints.
 - CLOVER's task builder maps new workflows fast and cost-effectively.
- Preserves data integrity, relationships, and metadata
- Flexible deployment: on-premises, air-gapped, cloud, or hybrid
- Lower Risk and Costs in Your Integration Strategy
- Streamlines execution, reducing overall expenses and uncertainty

Maximize the Value of Your Business Product and Data

- CLOVER provides the foundation to build out your digital thread incrementally, while saving time and professional services costs with self service options.
